

XLR2UTP8 Installation

XLR2UTP8 connects two external wireless microphone receivers with XLR outputs such as Sennheiser, AKG, Audiotecnica, Shure, ... into Yealink MS Teams and Zoom Room devices.

The XLR2UTP8 is supported by any Yealink device that is capable of connecting VCM38 microphones.

Installation

XLR F audio input 1 - to the output of your wireless mic receiver 1

XLR F audio input 2 - to the output of your wireless mic receiver 2

RJ45 PoE input - to your existing Yealink PoE switch

Use only with VCM38 microphones (or with no other mics).

See our similar products for installations with other Yealink microphones.

The number of XLR2UTP8 units per Yealink video room device follows the same rules as for VCM38 mics.

Speech from wireless microphones is transmitted to the remote side, it is not played back locally.

You can rename your XLR2UTP8 (which is first recognized as VCM38) to e.g. "Wireless" and you can separate the Mute control in the Yealink RoomConnect application.

Rename Mic
